

Neck Strap: A quick release neck strap to support the transmitter during use. This is to leave a hand free for holding and echo receiver or otherwise.

Spotlight: A powerful, removable torch which has an independent power supply that can be used with any of the boats for additional lighting at night.

Stern Light: The light can be fitted to the stern of any of the boats in conjunction with the spotlight to help navigation at night. With new batteries it will emit a very bright light for 50 hours or 100 hours if set in the "blink" mode. It is attached to the boat by means of a clip and a velcro strip.

Decal Sheets: A decal sheet gives you the chance to personalise your boat to your own taste. Each sheet is self adhesive, fluorescent and waterproof and can be cut to the desired shapes. A sheet is supplied A4 size.

12 volt DC - DC Converter: This converter can be plugged into a cigarette lighter socket and reduce the voltage as required. The options are 12 volts down to 1.5 - 3.0 - 4.5 - 6.0 - 7.5 - 9.0 with six choices of jack plug.

Bivvy Light: This is a light operated from either a push button or by a pressure mat, powered by a separate 12 volt supply (not supplied). The pressure pad is placed at the side of the bedchair and the push button at the side of your pillow on the bedchair. When you have a run in the middle of the night, you swing your legs off the bedchair you touch the pressure mat and the light is switched "on" until you stand on the pressure mat again. The same results can be achieved by using the push button. Therefore you can switch the light "on" with the pressure mat, and turn it "off" with the push button and visa versa.
